

ABSTRACT

A multi-functional gardening tool comprises a handle (4) with a handgrip (5) on a first outer end and a working member (1,2,3) on a second outer end. The working member comprises a first blade-like part (2) with which it is connected to the second outer end of the handle. The working member further comprises a second blade-like part (1) with a number of at least substantially parallel tines lying in a blade plane, which second part extends from the first part. The first and second blade-like parts of the working member together enclose an obtuse angle.
